KotOR2 doesn't seem to run on Vista on some computers.

Here is one solution to fix this problem:

(Please remember that this solution is offered to you at no guarantee or warranty. Use it at your own risk.)

- 1) You'll need KotOR1 to be installed.
- 2) Locate the file **Mss32.dll** in the KotOR1 game folder.
- 3) Now copy it to the KotOR2 game folder. Be sure to make a backup copy of the original just in case problems occur.
- 4) Now make sure the compatibility setting on the KotOR2 shortcut is set to run as Windows XP (Service Pack 2).
- 5) If you don't have KotOR1 installed just download the file provided on our [KotOR forums](http://www.old-republic.com/forums/index.php?showtopic=538) .
